Summary

Having gained the notion of engineering, I shaped my career by using the industrial engineering education effectively in my professional life.

My interest in software has always been a dimension that excited me inside. I became a self-taught front-end developer. I will continue to learn. Since my interest in software makes me feel more excited, being a front-end developer has always taken a place in my mind. For this reason, I have been a self-educated front-end developer and I will continue to improve myself.

An ambitious, enthusiastic, and open-to-learn front-end developer who cares about all aspects of the user experience using React, javascript, HTML and CSS.

Key Skills

- Project Management
- Effective Decision Maker
- Problem Solver
- Leadership
- Innovative
